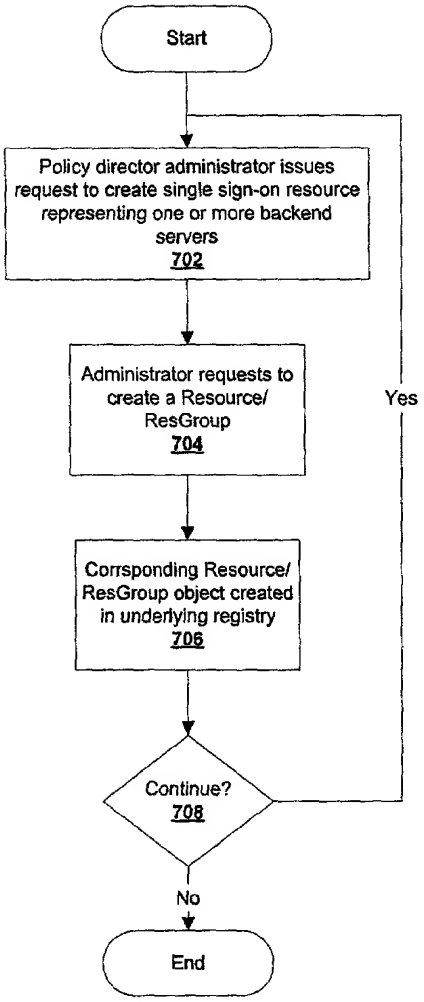
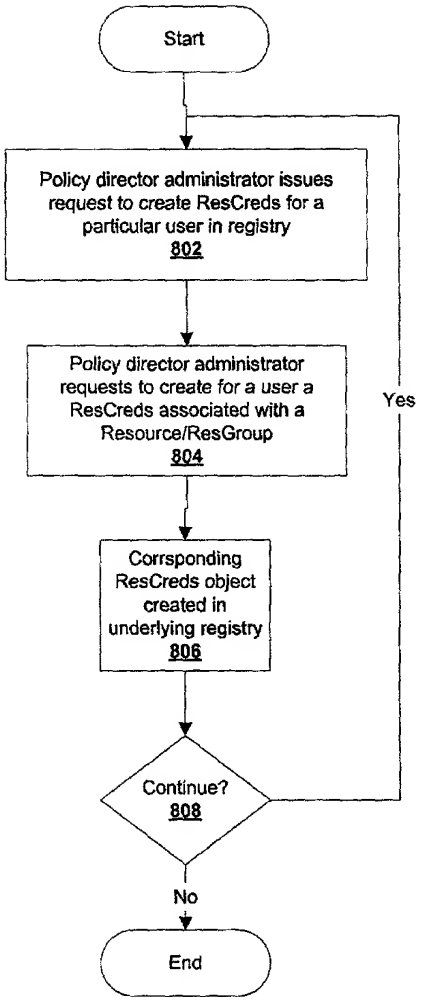
Figure 7



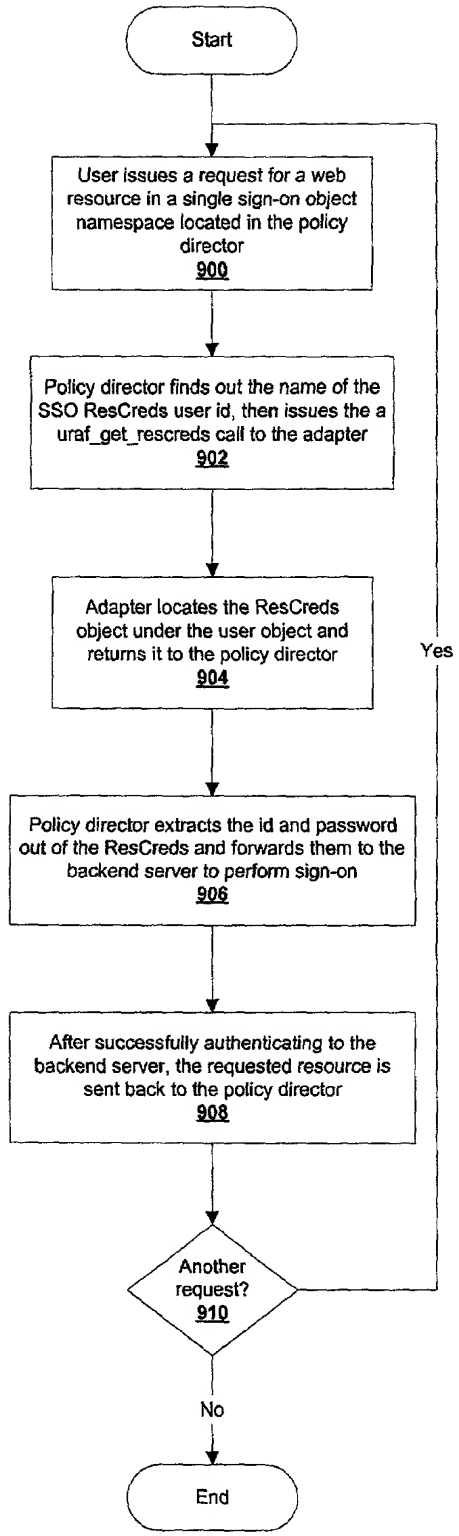
Start
Policy director administrator issues request to create single sign-on resource representing one or more backend servers
702
Administrator requests to create a Resource/ ResGroup
704
Corrsponding Resource/ ResGroup object created in underlying registry
706
Continue?
708
Yes
No
End

Figure 8



Start
Policy director administrator issues request to create ResCreds for a particular user in registry
802
Policy director administrator requests to create for a user a ResCreds associated with a Resource/ResGroup
804
Corrsponding ResCreds object created in underlying registry
806
Continue?
808
Yes
No
End

Figure 9



Start
User issues a request for a web resource in a single sign-on object namespace located in the policy director
900
Policy director finds out the name of the SSO ResCreds user id, then issues the a uraf_get_rescreds call to the adapter
902
Adapter locates the ResCreds object under the user object and returns it to the policy director
904
Policy director extracts the id and password out of the ResCreds and forwards them to the backend server to perform sign-on
906
After successfully authenticating to the backend server, the requested resource is sent back to the policy director
908
Another request?
910
Yes
No
End
